Team ID	–
Project Name	Food Ordering Behaviour and Consumer Trends
Maximum Marks	5 Marks

By using stories in Tableau, you can effectively communicate complex data in a way that is both interactive and engaging, making it easier for the audience to follow along and understand the insights. It's a tool for **data storytelling**, allowing you to present insights in a cohesive, engaging way that takes viewers through a logical progression of findings or analyses.

In Tableau, **Story** is a feature that allows you to create a sequence of dashboards, visualizations, and text to present data insights in a cohesive and narrative-driven way. It's like a slideshow within Tableau that guides the audience through a series of data points, helping them understand key insights, trends, or outcomes of your analysis.

Story 1

Observations

- **Desserts emerged as the most ordered cuisine**, indicating strong customer preference compared to other cuisines.
- **Premium restaurants recorded the highest number of customer orders**, reflecting greater demand for premium dining options.
- **Mumbai ranked as the leading city in food order volume**, highlighting it as the strongest market among the top five cities.

- **Premium restaurants achieved the highest average order value,** indicating higher customer spending per order.

- **Customer ratings varied across different meal types**, providing insights into customer satisfaction and dining preferences.
- **Repeat order analysis revealed customer loyalty patterns** for the selected cuisine, helping identify repeat purchasing behaviour.
- **Company type influenced meal ordering behaviour**, showing differences in meal preferences across various company categories.
- **The Tableau Story presents a step-by-step analysis of customer ordering behaviour**, enabling users to understand trends and make informed business decisions.
